Ideation Phase

Building Empathy & Discovery

Date	4 Aug 2026
Student Name	Navendhiran C
Project Name	Book a Doctor – Online Medical Appointment Platform
Maximum Marks	4 Marks

Empathy Map Canvas

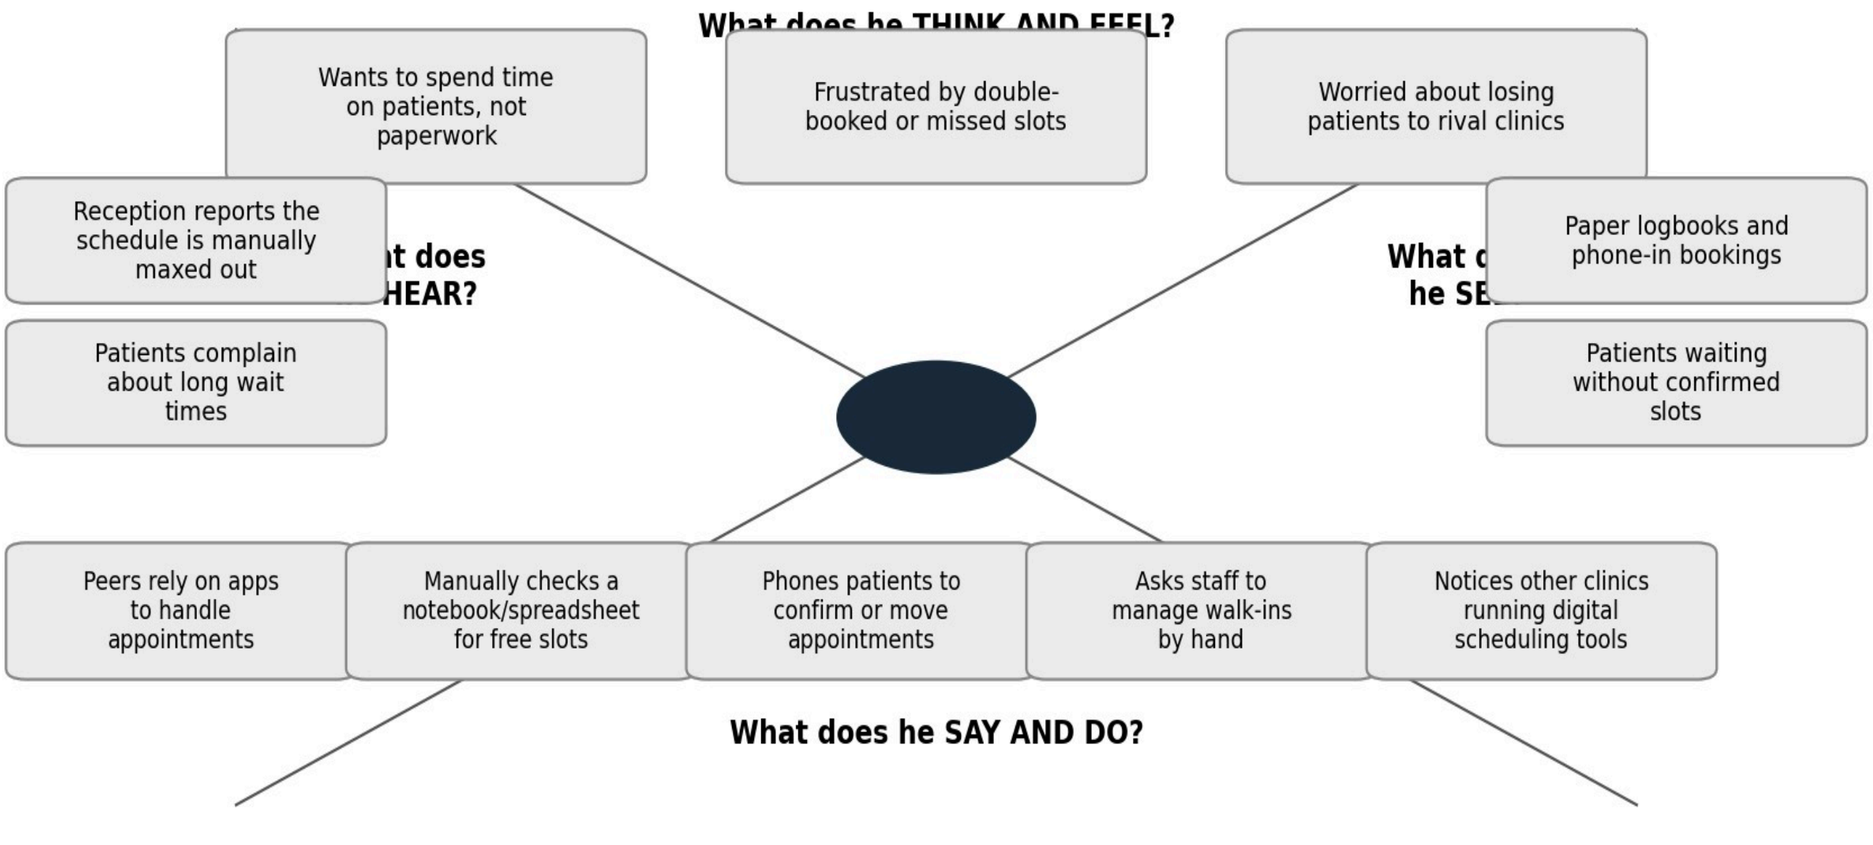

An empathy map lays out what a user thinks, feels, hears, sees, says, and does — helping the team design around genuine frustrations and goals instead of guesswork. Because Book a Doctor serves two main user types with very different needs, separate empathy mapswere built for the Patient and the Doctor.

Pain		
Struggles to locate a qualified doctor who's free nearby	Time wasted calling clinics to check slots	Can't pull up past prescriptions or reports online

Gain		
Fast, confirmed bookings	Trust from verified doctor profiles & ratings	Easy reminders and access to her medical history

Empathy Map — Doctor (Book a Doctor)

Pain		
Double-bookings caused by manual scheduling	Time lost coordinating by phone	No quick way to view patient history or records

Gain		
Scheduling that's automated and conflict-free	More time for actual patient care	One centralized place for patient records

Key Takeaways

- Patients want a fast, transparent, trustworthy way to find and book a doctor.
- Doctors need automation to remove manual scheduling conflicts and free up time for patient care.
- Both personas rely on the same real-time system, reinforcing the need for one role-based MERN platform instead of separate manual workflows.
