Project Design Phase

Proposed Solution Worksheet

Date	04 Aug 2026
Student Name	Navendhiran C
Project Name	Book a Doctor – Online Medical Appointment Platform
Maximum Marks	2 Marks

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	**Problem Statement (Problem to be solved)**	Patients find it hard to quickly locate and book the right doctor; doctors lack any digital tool to manage their schedules; and admins have no easy way to verify doctors — everything is still handled manually.
2.	**Idea / Solution description**	A MERN-based web platform where patients search and book doctors in real time, doctors manage their own schedules and patient documents, and admins verify doctors — all through one role-based, secure system.
3.	**Novelty / Uniqueness**	Brings together real-time availability, role-based access for all three user types, and secure document upload in a single unified system — a contrast to today's fragmented phone calls, paper records, and manual verification.
4.	**Social Impact / Customer Satisfaction**	Saves patients time and stress finding trustworthy care, gives doctors more time for patients instead of admin work, and builds trust through verified doctor listings.
5.	**Business Model (Revenue Model)**	Revenue comes from a per-booking commission, subscription plans for doctors and clinics, and a freemium model for patients with paid extras like priority booking.
6.	**Scalability of the Solution**	The modular MERN architecture scales easily with more users, and can extend to video consultations, payments, and multi-city support without a redesign.
